Product Description

Sta-Sol[®] microemulsions are a line of semi-formulated products ideal for aqueous cleaning applications. They are compatible with a wide variety of other solvents and additives and can be used “as-is” by the end user or by the formulator as the core in a fully-formulated product.

Sta-Sol[®] ME 2100C is a flexible, general purpose microemulsion concentrate delivering powerful solvency for many cleaning and formulating applications. This product can be used to replace or reduce other solvents, such as D-Limonene, and may be enhanced with the addition of co-solvents.

Featured Applications

- Pulp and Paper Cleaning & Conditioning
- Paint stripping and graffiti removal
- Concrete surface cleaning
- Electronics Process Cleaning
- Heavy Duty Hand Cleaning
- Ink Remover
- Industrial hard surface cleaners
- Many More uses and applications

Environmental, Health & Safety

- Not included CERCLA/SARA hazardous substances list
- Not required SARA Section 313
- Not considered a hazardous waste under RCRA
- Not included on the CWA list of hazardous substances
- Not a hazardous air pollutant (Clean Air Act)
- Not considered VOCs (CA, US, EU, CAN)¹
- Biodegradable²
- Non Flammable³
- Not listed as ozone depleting substance⁴
- Not listed as carcinogen⁵

Cost Benefits

- Reduced final formulation costs
- Faster product development
- Slower evaporation—Deeper cleaning
- Reduced Freight cost

Although the information and recommendations set forth herein (hereinafter “Information”) are presented in good faith and believed to be correct as of the date hereof, ST Laboratories, Inc. makes no representations or warranties as to the completeness or accuracy thereof. Information is supplied upon the condition that the persons receiving the same will make their own determination as to its suitability for their purposes prior to use. Product Bulletin

Specification

Water Content	5 max
Acid Number, mg KOH/g	2 max
Color, Pt-Co (APHA)	50 max
Appearance	Clear to slightly hazy liquid

Physical Properties

Density, g/ml at ~24 °C	1.071
Flash Point, °C	>93
Viscosity, cSt at 25 °C	12
Refractive Index	1.4358
pH (10% solution in water)	5.1
Freezing Point, °C	~20 °C
Initial Boiling Point, °C (d = decomposes)	163°C (d)
Odor	Mild, sweet
Kb Value	>200
Vapor Pressure @ 20 °C, excluding water, calculated by using Raoult's law, mm Hg (kPa)	.029 (0.004)
% VOC Content: according to US EPA 40 CFR 59.203(f)1	0%
% VOC Content: according to EU Solvents, Emissions Directive 1999/13/EC	0%
US EPA Method 24 ⁶	75
Water dilutability for microemulsion, % water	0—50% or 90-100%
Shelf Life ⁷	2 Years

Footnotes:

1. EU Solvent Emissions Directive 1999/13/EC, US VOC Exemption for consumer products EPA 40 CFR 59.203(f)(1), Environment Canada's "Guidelines For Volatile Organic Compounds In Consumer Products", Nov. 2002, Section 94508(a)(80) of Title 17 of the California Code of Regulations.
2. According to OECD definition, using empirical data, and results from EPI Suite™ modeling software.
3. According to Chapter 2.6 of the Globally Harmonized System of Classification and Labeling of Chemicals (GHS)
4. Reference: UNEP – The Montreal Protocol on Substances That Deplete the Ozone Layer
5. According to NTP, IARC, ACGIH, EU-Dangerous Substances Directive (67/548/EEC)- Annex I, and California Proposition 65.
6. VOC content determined by first measuring volatile content according to ASTM D2369, then adjusting for water content according to EPA Method 24 equation 24-4.
7. When stored in the original container, kept tightly closed and dry, in a well ventilated location.
